

Streamline your warehouse operations with our Pallet Management

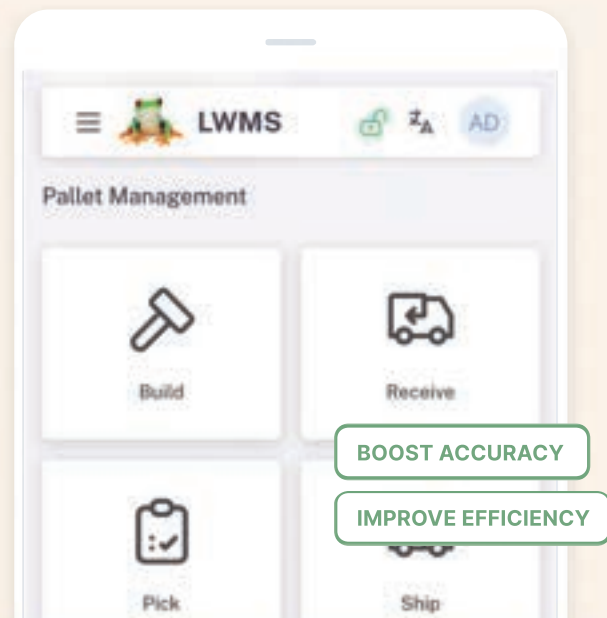

LilyPad WMS

Access all warehouse transactions from anywhere, supported by **Advanced Features** that improve accuracy and operational efficiency.

With **Pallet Management**, your team can take full control of both **single-product** and **mixed-product pallets**, making inventory handling faster and more intuitive.

Key Features

- Create and label pallets with ease.
- Move items between pallets effortlessly.
- Transfer entire pallets to new warehouse locations.
- Check pallet contents and inventory levels instantly.
- Pick and ship full pallets in just one step.

We only ship in pallets and didn't realize how much time we were losing. Without this feature, every order had to be processed in eaches or cases — constant counting. LilyPad's Pallet Management saves us around 3 hours a day.
